

Commitment to Quality

At Extreme Panels, we believe in the products we produce so much that we not only work in an Extreme Panel product-built building, but we live in them also.

All the salesmen at Extreme Panel have built their own homes with our product. By going through the entire building process, they have the knowledge and expertise to assist our customers with the issues that arise during construction. They know how important it is to get help when you need it, not a couple of days later. They firmly believe in our product because of their own personal experiences in building with quality structural insulated panels.

Our panels are produced using the highest quality materials and are built using expert craftsmanship. We will be there with you every step of the way to be sure you have the same feeling of comfort and confidence in your home that we have in ours.

Once you have a plan, we can provide you with whatever level of assistance you require. Our staff can provide you with estimates for each step of the job so you can decide how much, if any, you want to do yourself. We can convert your drawings, help choose a contractor, or assist you on starting the project yourself. We will work with your building code officials to be sure they provide you a building permit.

Owners Terry and Linda Dieken (right) with owners of the first home built by Extreme Panels.

Extreme Panels was started in 1992 by Terry and Linda Dieken. The company has evolved from a few employees on the family farm shop to a 65,000 sq. ft. office and manufacturing facility. As owners of Extreme Panels they have instilled in their employees the importance of running a business with integrity and ethics, and to treat customers the way they would want to be treated.

Extreme Panels follows an extensive quality control program, is a member of the Structural Insulated Panel Association (SIPA), and proudly supports their community and other organizations.

Quality Structural Insulated Panels (SIPs)

The Next Generation of Home Building

Design Flexibility

Think Green

You've worked hard to get where you are today - long hours, hectic schedules, always doing things for others. You somehow managed to put something away for yourself and now it's your turn.

Structural insulated panels will help reduce every-day outside sounds. Sit back and enjoy the peace and quiet.

Building your dream home is something you have thought about for years. You've scanned the internet, talked with contractors and looked through magazines to find the floor plan that fits your lifestyle. But how much thought have you given to the structure that will protect the people you work so hard to protect... your family?

Take comfort in knowing your home was built with one of the strongest materials offered today.

Have architectural freedom to create an indoor environment with better air quality and daylighting.

You deserve the best and the best is clearly within reach.

The Extreme Panel high performance home offers more design flexibility, greater energy efficiency, and a stronger structure than traditional building systems... and is affordable, fast, and environmentally friendly!

What is Green Building? Green building is a design and construction practice that creates a healthier and more resource-efficient model of construction, to promote the health and well being of your family and the environment. Research and experience increasingly demonstrate that when new construction is designed using green building techniques, they can provide great environmental, social and economic benefits far into the future.

Practice Green Building by cutting energy costs, saving on construction time and reducing construction waste.

Cut Energy Costs up to 60%. Extreme's structural insulated panels provide high insulation values, saving you up to 60% on your cooling and heating cost. Where wall thickness is the same, panel construction out performs stick framing by 40 to 60 percent. A typical 6" wall has an R-value of 24 while the 12" roof panel has an R-value of 48. That translates into energy cost savings for you.

Save on Construction Time. Extreme Panels' pre-built panel system saves you time and money during every phase of the project. All rough openings are precisely pre-cut, headers installed, electrical chases pre-routed... all at the factory before it reaches the construction site.

Reduce Construction Waste. Extreme Panels are made to order and fit together precisely, creating far less waste at the construction site. This equates to less cost of materials and waste removal. Less waste equates to preserving natural resources and the environment.

OSB sheathing is bonded to foam core with structural adhesive to form an I-beam of strength.

Energy saving EPS foam insulation provides R-value of 24 for 6" wall panels and 48 for 12" roof panels.

Extreme Panel construction is offered in foundation, floor, wall and roof panels.

Electrical chases are pre-routed for ease of wiring.
